

INTRODUCTION TO THE NEW TALON PROGRAM VERSION 1.8
FEB 2004

Attention to all Supervisors of Local National Employees, Timekeepers and System Administrators.

The Office of Defense Cost is converting to a new system called SAP. This conversion includes changes of the current pay codes from 3 to 4 characters, duevo codes from 1 to 4 characters, Additional modifications have also been made to the report section of the program and to the consolidated Data file.

This new program will be effective the 1st of April 2004.

The payroll data that has been sent to us in the past will not match the configuration of the new SAP Program.

I was able to modify the Talon Program to match the new SAP program configuration; I've also included a new report form for management purposes.

I'm sorry for the short notice, but circumstances did not allow for an earlier notification. In the attachments you will find instructions on how to load the new patch 1.8 over your existing Talon Program. This patch will enable you to keep your current data by converting to the new configuration and will allow you to continue working with Talon as in the past. Also attached are the listings with the new pay codes and duevo codes.

System Administrators please assist your Local National Timekeepers to load the patch if they run in to problems.

You are always welcome to give me a call or send me an email if you have any questions, DSN: 480-2454/2744, marion.poth@ramstein.af.mil.
