BULLET BACKGROUND PAPER

ON

THE DEPLOYMENT TRANSITION CENTER

PURPOSE

Provide historical background on the Air Force Deployment Transition Center (DTC), curriculum, scope, impact on service members and growth/expansion.

BACKGROUND

- In early 2010, CSAF directed the creation of the DTC to address increasing negative personal and family impacts attributed to continued deployment operations and repeated combat exposures
 - -- Attendance was restricted to line remarked deployment orders based on outside the wire and/or high-risk mission sets (e.g., EOD, SF, and Convoy Ops)
 - --- Expansions have occurred to include TACP (2011), Joint Service: USMC & Personnel Recovery (2011); Navy EOD (2012); Medics (2012); Air Advisors (2014); OSI (2017)
 - -- Attendance is open to any AFSC at any location when the downrange commander (G-Series or first O-6 in the chain of command) wishes to nominate
 - -- The DTC was to be a "third location" (removed from the AOR and CONUS). It was assigned to the 86 Airlift Wing, Ramstein Germany, and stood up on 1 July 2010 under 86 MSG/Detachment 1
 - --- Ramstein was strategically chosen for its world-class support services and central location for inter-theater airlift and mobility
 - -- AF/A1S has responsibility and oversight for DTC curriculum, policy, and funding

PROGRAM DESCRIPTION

- The DTC provides post-deployment decompression and reintegration education to redeployers enroute to their home stations
- Consists of strength-based approach and peak performance mentality to assist redeployers;
 provides tools and skills needed for successful bridge from deployment to the home-front based on researched/proven methodologies
- Attendees identified via: 1) line-remarked on deployment order based on mission set, tasking or

- career field; 2) commander-nominated during deployment based on change in mission, significant event, exposure to trauma, or home-front stressors
- The program is four total days based around facilitator-guided, participant-focused small group discussions; days one and four are dedicated to arrival and departure respectively
- Attendees have the opportunity to relax and talk about their deployment experience in an informal small group environment (not therapy or a medical/mental health program)
- The DTC has had two successful pilot projects to address unique 'deployment' stressors associated with "Deployed-in-Place" missions (693d ISRG at Ramstein) and "Rapid Redeployment Cycling" (435th CRG at Ramstein).

STAFF

- DTC staffing has flexed since inception due to mission needs and throughput
 - -- Current permanent party includes a Program Director, two Mental Health Technicians, and a Knowledge Operator
 - -- Additional staff support is provided by 182-day deployment taskings (LRO, TMO, PERSCO, lodging, and mission-set managers), 65-day deployed support for AEF pivot surges, and 86 AW augmentees.
- Support facilitators are intended to come from the same career field as the redeployers they are working with and are expected to have deployment experience

RESULTS

- The DTC supports approximately 2-3K redeployers annually with a maximum of 15 per class; both annual throughput and class sizes change depending on a multitude of variables (i.e., theater of war, missions, line remarked/designated mission set or AFSCs, etc.)
- As of 5 Mar 2019, 13,848 redeployers have transitioned through the DTC, including AD and Guard/Reserve component Airmen, Marines, and Sailors (specifically USMC/Navy EOD, Personnel Retrieval and Processing teams), and civilians
 - -- A 2011 study of DTC participants was released in Military Psychology, 2016, vol.28, No.2. Key findings indicate DTC participants reported lower levels of depression, post-traumatic stress symptoms and lower levels of relationship conflicts following return from deployment, as compared to weighted control groups.
 - -- 93% of 2018 attendees (n = 1,825) indicated the DTC was a worthwhile experience. 72% of participants noted they are more likely to accessing helping resources based on program attendance. 87% felt they received helpful guidance to facilitate a smooth transition/reintegration

with family/friends. 93% indicated they were able to sleep, rest, and restore their energies while at the Center.

RECOMMENDATION:
