

Disposal of domestic waste that may be contaminated with coronavirus in the city and county of Kaiserslautern

1. Potentially coronavirus (SARS-CoV-2) infected waste from private households **must, without exception, be disposed of in the container for non-recyclable waste (black can).**
2. To avoid putting waste collectors or people using the same waste can at risk, it is **prohibited to dump contaminated items loosely** in the can.
3. This waste must be wrapped in **tear- and moisture-proof sacks** (e.g. plastic or garbage bags) and **sealed tightly**, for instance with a knot. If required, use several bags and discard the bagged up waste in the black can.
4. **Put pointed or sharp items** in unbreakable, non-penetrable disposal boxes (e.g. sharps containers).
5. **Under no circumstances may sacks or loose items be placed next to the waste can or container** where they are accessible to others.
6. Items that do not fit in the black can must be wrapped carefully and stored in a place not accessible to other persons or animals until pick-up.

In case the health authority passes other stipulations, compliance to these stipulations is mandatory!

If you have any questions regarding correct waste disposal, feel free to contact your competent waste management team.
